DAHER: managing flows for the Defence sector

With the DAgeSCOPE tool, DAHER enhances its "Manufacturing & Services" offering for Defence customers seeking to secure their operations in France and internationally.

Paris, May 21, 2010 – Daher, European integrated equipment and services supplier, launches a service offering for real-time flow management dedicated to Defence industrial groups and armed forces. This offer meets the current challenges facing defence players, with the ever-increasing complexity of their supply chains.

The DAHER service, based on its DAgeSCOPE tool -initially developed to cater for its own needs as a European equipment manufacturer with international scope- offers industrial groups and armed forces permanent visibility of all their flows throughout the logistical and industrial value chain (production, customs, transport, etc.) and enables them to react to unforeseen events appropriately. It also allows them to model the flows and highlight the potential for optimization of existing processes. Moreover, the great flexibility of the DAgeSCOPE tool means it can adapt to all types of flow and all sectors of activity, as well as integrating all the supply chain service providers into the flow management solution.

This service completes the tailor-made service portfolio offered to the Defence sector by DAHER, particularly for industrial groups operating on their export markets. The group delivers a wide range of services including management of manufacturing or assembly facilities overseas, sourcing operations for industrial offset agreements and implementation of logistics solutions (such as multimodal transport, etc.) or industrial support.

DAHER's "Manufacturing and Services" model closely associates these services with the group's production activities to support organizations and companies from all four strategic sectors and throughout the project life-cycle. The group can therefore follow a project from start to finish, for instance spanning development of a plant abroad through to supervision of exchanges between the industrial group and its partners worldwide.

For further information on DAHER – www.daher.com

DAHER is a European integrated equipment and services supplier.

DAHER specializes in the aerospace, nuclear, defence and industry sectors, concentrating on three core activities: manufacturing, services and transport, which it combines into a global offering. Founded in 1863, DAHER is an independent, international group with sites in 12 countries. DAHER has tripled in size over six years to reach an annual turnover of 740 million Euros in 2009.
