DEFENCE: DAHER upgrades its offer with integrated shelters

The European equipment and services supplier offers a global solution for equipped shelters which includes the design, manufacture and complete integration of equipment, and signs three new contracts.

DAHER announces the signing of three new contracts; with **ENVIRONNEMENT SA** to manufacture measuring stations, with **THALES AIR SYSTEM** to supply radar shelters and with **FMV** (the Swedish defence procurement agency) for the supply of medical shelters and mobile weather stations.

DAHER offers a global solution of totally integrated shelters that includes the **design, development** up to qualification tests and **manufacture**.

Shelter integration involves consideration of the following:

- **Severe environmental constraints** (extreme temperatures, bacteriological and chemical protection, electromagnetic protection, vibratory constraints and impacts, securing data for classified networks, etc.)
- **Host structures**
- **Wiring networks**
- **Operator workstation ergonomics**
- **Integrated ground support equipment** (generator, inverters, air conditioning, heating, compressed air, handling autonomy, etc.)
- **The integration of all special equipment directly dependent on the shelter's features**
- **Associated services, in particular for shelter maintenance in operational conditions** (MCO)

DAHER can therefore offer a complete range of integrated shelters, including aerotransportable **integrated tactical shelters** made of aluminium for radar control systems, mobile control and communications centres and mobile weather stations, among others. This range also includes **integrated logistics shelters** made of steel, including mobile hospitals (operating theatre, dentist, field hospitals), all life base elements and associated modules (kitchen, mess, offices, bunks, toilets, water treatment, waste processing, generator, air conditioning, etc.).

These shelters may be associated with joint operations including metallic fabric tents, as in the scope of deploying mobile hospitals. DAHER also supplies reusable containers to protect fragile accessories.

To complete these integration activities, DAHER has structured and strengthened its teams, in particular by recruiting engineers who have brought new skills in the fields of mechanical, hydraulic and electrical wiring and network integration. Likewise, **the two plants at Montrichard in France and Horice in the Czech Republic** now have new workshops directly dedicated to integration activities.

DAHER thus brings the Defence sector (armed forces and industrial groups) real expertise in a global solution by offering shelters totally integrated to meet very precise needs.

For further information on DAHER – www.daher.com

DAHER is a European integrated equipment and services supplier, dedicated to Aerospace and other manufacturing industries.

In addition to Aerospace, DAHER specializes in three other sectors: Nuclear, Defence and Automotive and is developing in three fields of expertise: manufacturing, services and transport, which enable it to offer a comprehensive package.

Founded in 1863, DAHER is an exclusively family-run, independent international group, with more than 5,000 employees and 12 international installations (4 in Western Europe, 3 in Eastern Europe, 2 in North America, 2 in Africa and 1 in Australia). DAHER has doubled in size over four years to reach an annual turnover of 530 million euros in 2007.
