

Daher enters into a partnership with Contextor, asserting its leading position in supply chain digitization

Paris, January 8, 2018 – A supply chain and logistics expert, Daher continues to invest in the supply chain of the future and has entered into a partnership with the French software publisher Contextor. The latter has developed Robotic Process Automation, a solution to free up personnel from routine data processing and administrative tasks. Daher perceived that this technology, initially used for B2C applications, afforded a good opportunity to improve task efficiency in the supply chains of its industrial customers.

The cutting edge of innovation in industrial supply chains

Already in the forefront of innovation in the automation of physical flows, **Daher has moved to the next level with this partnership to automate a number of data processing and administrative tasks with an impact on supply chain performance**, such as the management of procurement and flows. In this way, Daher is confirming its advance in the innovation and integration of the latest digital technologies for the purpose of improving its customers' industrial and supply chain processes.

By optimizing processes and boosting their performance, the new partnership means that the teams at Daher will be able to concentrate on the most pressing concerns of its industrial clientele, i.e. the management of production and delivery times, quality control and inventory levels.

"A supplier of logistics and supply chain services to industry, Daher has always made a point of building the latest digital technologies into the services that it offers. We aim to keep optimizing our own performance levels and those of our customers. We track new technologies, including those developed in the B2C sector and apply them to our own practice areas. This ongoing search for the best innovations and partners has made Daher a reference name in supply chain automation and digitization," notes **Hervé de Chillaz, Senior Vice President of the Advanced Technologies Business Unit at Daher**.

*"For 15 years, Contextor has been working for major international companies – banks, insurance companies, firms selling complementary health insurance, telecoms operators and energy suppliers – wishing to automate their business processes. Our Robotic Process Automation frees their personnel from repetitive, tedious office tasks, making them more available to serve customers. So our automation solution fosters and accelerates corporate digital transformation. We are very pleased with this new partnership, which will allow us to reach the next stage of our business growth by collaborating with Daher on an application dedicated to industrial processes," observes **Patrick Lemare, Chairman and CEO of Contextor**.*

A partnership born on Bpifrance's Le Hub networking platform

A key player in anticipating what industry will be like tomorrow, **Daher operates within a dynamic, innovation-oriented ecosystem in which collaborates with academic, institutional and business partners as well as promising start-ups.** This is consistent with the objectives of the Bpifrance Le Hub platform, which promotes business networking and joint projects.

"Through Le Hub, BpiFrance aims to speed up the formation of commercial partnerships and the acquisition of start-ups by large French companies. We are delighted to see Contextor and Daher working together. This is a good example of a business deal that will create value for each party. We hope to see many such undertakings across all sectors of the French economy. In our view, model hybridization is a major vector for growth." **Cécile Brosset, head of Le Hub at Bpifrance.**

About DAHER - www.daher.com

DAHER is an equipment supplier developing Integrated Industrial Systems for aerospace and for advanced technologies. By combining its know-how in industrial manufacturing, in product and process engineering, logistics and transport, and in industrial services, DAHER designs and develops value-added solutions for its industrial partners, who derive the benefit from this convergence of industry and services. DAHER has established itself as a leader in 5 fields of activity: aircraft manufacturer, aerostructures and systems, integrated logistics, nuclear services, and valves.

DAHER generates a turnover in excess of one billion euros, with an order book which corresponds to more than 3.5 years of turnover. Driven by bold innovation ever since it was founded in 1863, DAHER has established itself today as one of the major players of Industry 4.0 and the Factory of the Future.
