

The Daher production team at Sandpoint, Idaho is shown with their milestone 300th Kodiak aircraft prior to its delivery.

Daher's Kodiak multi-role aircraft: 300 deliveries and going strong!

Sandpoint, Idaho, USA, December 1, 2021 – The 300th Kodiak delivery marks a new milestone for this rugged and capable multi-role workhorse, underscoring Daher's commitment to its future as part of the company's single-engine turboprop-powered aircraft product portfolio.

The Kodiak was introduced in 2007 as a new-generation short takeoff and landing aircraft capable of bringing services and heavy supplies to the most remote regions on the planet. Today, Kodiak has earned its reputation as an ultra-modern, ultra-safe and extremely versatile aircraft with applications across the business and general aviation sectors, as well as in a wide range of duties that include humanitarian, medical evacuation, and in the utility, governmental and special mission sectors.

Capable of taking off from unprepared strips of 1,000 feet and flying 1,000-plus miles with excellent operating economics, the Kodiak fills a niche between a helicopter and a business jet — able to haul passengers in refined luxury and integrating the capability of quickly converting the cabin to carry cargo, accommodate stretchers for air ambulance service, deploy skydivers and many other applications.

“Every day around the world, Kodiak aircraft meet the mission: from delivering crucial aid in conflict zones to providing comfortable airlift for business and personal travel,” said Nicolas Chabbert, the Senior Vice President of Daher's Aircraft Division, and CEO of Kodiak Aircraft.

Daher acquired the Kodiak product line in 2019, and Chabbert reconfirmed the company's commitment to evolving and supporting the aircraft by further improving its capabilities and reinforcing the worldwide services network. With the acquisition, Kodiak joined Daher's TBM family of very fast turboprop aircraft, positioning the company as a leading manufacturer of general aviation airplanes and one of the world's three airframe producers with final assembly lines on two continents.

"This milestone delivery comes as the Kodiak program is on the rise following its acquisition by Daher in 2019," stated Mark Brown, Kodiak's Sales & Marketing Director, and Chief Demo Pilot. "Having been with Kodiak for eight years, the improvements made since 2019 in terms of manufacturing enhancements, production efficiencies and the product support integration is remarkable. These are exciting times, and I'm really proud to be part of the team at Daher's Aircraft Division."

Kodiak aircraft are in service around the globe, with more than half of them registered in North America, followed by Asia, the Pacific region, Europe, Africa, Latin America and South America. The global fleet has logged a combined total of more than 278,700 flight hours.

The Kodiak's excellent handling qualities and stability at all speeds – combined with loiter times of up to 10 hours – make it a perfectly-tailored special missions aircraft for uses that include aerial mapping, air ambulance, fire suppression support, ISR (Intelligence, Surveillance, Reconnaissance), parachute operations, resource analysis, training and wildlife management/anti-poaching.

Additionally, the aircraft easily adapts to water operations through the installation of amphibious floats without the need for structural upgrades.

The Kodiak has benefitted from continual improvement since its introduction, with the Kodiak 100 Series III version incorporating features for improved flight safety, greater cabin comfort, augmented operational capabilities from both unimproved strips and on water with floats, as well as upgraded quality and more comprehensive maintenance coverage. All new-production Kodiak aircraft are being built in the Kodiak 100 Series III configuration .

Among the Kodiak 100 Series III upgrades for enhanced flight safety and situational awareness is the first integration of Garmin's GWX™ 75 Doppler-capable, fully stabilized color weather radar on a Kodiak. Standard equipment that is retained on the Kodiak 100 Series III includes the Garmin G1000 NXi fully integrated flight deck and GFC700 autopilot with full envelope protection and level mode, along with an angle of attack (AOA) indicator, SurfaceWatch runway monitoring technology, ChartView-enabled card, and the Synthetic Vision Technology for virtual flight reference.

The Kodiak 100 Series III's excellent versatility is further improved with incorporation of the largest tire size available for Kodiak aircraft (29 inches), a higher landing weight of 7,255 lb., and a lower zero-fuel weight that allows more payload – especially on shorter missions.

Additionally, Kodiak 100 Series III aircraft are float-ready for seaplane operations, and the standard pitch latch propeller enables easy maneuvering at the dock by enabling the propeller to stay in a fine pitch during engine shutdown – giving greater control and safety on the water. Skin gap filler sealant on the aircraft is the fifth step in an industry-leading anti-corrosion process, providing protection especially in high salinity environments.

300th delivery for the Daher Kodiak multi-role aircraft

The standard package for Kodiak 100 Series III aircraft also provides an all-inclusive four-year Kodiak Care maintenance program, which covers scheduled maintenance up to the fourth annual inspection or a total flight time of 1,000 hours – whichever comes first. Pratt & Whitney Canada's Gold-level ESP™ Maintenance Program for the PT6A-34 turboprop engine is included as well, along with one year of CAMP Systems maintenance tracking and a year's subscription for Garmin's NavData electronic database.

About Daher – www.daher.com

Daher is an aircraft manufacturer and an industry and service equipment supplier. Daher asserts its leadership in three main businesses: aircraft manufacturing, aerospace equipment and systems, logistics and supply chain services; and achieved a turnover of 1.1 billion euros in 2020. With the stability provided by its family ownership, Daher has been committed to innovation since its creation in 1863. Today, present in 13 countries, Daher is a leader in Industry 4.0, designing and developing value-added solutions for its industrial partners.

Daher also is on social networks:

About Daher's aircraft product line – www.kodiak.aero / www.tbm.aero

Daher manufactures two families of single-engine turboprop airplanes: the Kodiak utility aircraft in Sandpoint, Idaho, USA, and the very fast pressurized TBM in Tarbes, France.

The Kodiak 100 Series III is an unpressurized 8-10-seat airplane equipped with Garmin's G1000 NXi avionics, capable of operating on uneven and unimproved runways, or on water in the amphibious version. Its unique combination of robust construction and remarkable 3,530 lb. useful load has resulted in many additional applications for the Kodiak, including special missions, medevac, as a skydiving platform and more.

Current TBM models in production are the TBM 910, equipped with Garmin's G1000 Nxi avionics system, controlled by a keypad; and the TBM 940, featuring Garmin's G3000 avionics with touchscreen controller, an autothrottle and the HomeSafe™ emergency autoland system. Both models offer increased automation and superior performance – a maximum cruise speed of 330 kts. – and high efficiency with a 1,730-naut. mi. maximum range and a fuel consumption of 37 U.S. gallons per hour at economy cruise.

As of November 30, 2021, a total of 300 Kodiak and 1,060 TBM aircraft have been delivered to international owners and operators, with the global fleet accumulating some 2.2 million flight hours.
