

Daher commits to a low-carbon future

Orly, France, September 2, 2025 – Staying true to its founding values as a committed and responsible family-owned business, Daher is taking a major step forward in its sustainable development strategy by adopting an ambitious and structured climate policy. This new initiative is designed to accelerate the transition toward a low-carbon future, aligned with the goals of the Paris Agreement on climate change.

As a unique player in the aerospace value chain – with activities ranging from aircraft manufacturing to industrial logistics – the Daher Group recognizes its responsibility in driving the sector's environmental transformation. This distinctive positioning enables the Group to act on multiple fronts, working directly with its entire ecosystem: customers, suppliers, partners, and employees.

In a context where the aerospace industry faces major challenges related to energy transition, Daher intends to lead by example. With a long-term vision and collective mobilization, the Group places climate action at the center of its priorities – serving both current and future generations.

This climate policy is built on four complementary pillars:

1. Reducing carbon emissions from operations

Daher is committed to significantly reducing its greenhouse gas emissions, aligned with the 1.5°C target set by the Paris Agreement. The goal is clear: a 50 percent reduction in emissions from operations between 2022 and 2032, with the first step of a 23 percent reduction from 2027.

To achieve this, the Group is focusing on energy efficiency: the application of electrification, the adoption of lower-carbon energy sources (such as sustainable aviation fuels/SAF and biofuels), and the optimization of its processes and facilities.

2. Engaging suppliers in the transition

Recognizing that climate performance also depends on upstream activities, Daher places its suppliers at the core of its strategy. By 2027, the Group will assess the carbon maturity of its 50 highest-emitting suppliers, expanding this analysis to the top 100 by 2032.

Daher will work to ensure reliable CO₂ data for its upstream emissions in the Paris Agreement's Scope 3 emissions category by collecting data from its most impactful Tier 1 suppliers. Representative CO₂ data will be integrated into the Group's management and reporting tools.

The objective is to co-develop emission reduction pathways for the Paris Agreement's Scope 1 and Scope 2 categories with these partners, aligned with the Agreement's 1.5°C target.

3. Reducing emissions from products and services

Daher is taking action on three fronts to reduce the carbon footprint of its products and services.

The Group has committed to developing a lower-carbon aircraft by 2027, while also continuously improving the energy efficiency of its airplanes and increasing the use of sustainable aviation fuels in its own flight operations. The share of SAF blended with conventional kerosene will exceed 10 percent by 2027, reaching 20 percent by 2032. Daher also supports initiatives to authorize SAF blends above 50 percent to accelerate the sector's transition.

In parallel, Daher is heavily investing in innovation to make its products lighter in weight. At least 50 percent of its research & development budget is dedicated to research in composite materials, with the goal of delivering lighter aerostructures for future aerospace programs. By the end of 2027, eco-design testing and training will be conducted to integrate these principles from the design phase.

Finally, the Group is enhancing the energy efficiency of its services and transportation operations, while promoting the use of biofuels in ground operations. Research & development investments will continue to optimize tools and transportation methods, with a clear commitment to offering more sustainable services to its customers.

4. Adapting activities to climate risks

Daher also is anticipating the impacts of climate change on its infrastructure. By the end of 2027, comprehensive physical risk mapping will be conducted for its sites, as well as those deemed critical in its value chain. Based on this assessment, an adaptation plan will be defined by 2032 for the most exposed sites to strengthen their resilience to climate hazards and ensure operational continuity.

Julie de Cevins, the Daher Group's Chief Sustainability Officer, stated: "Daher's climate policy is a clear response to the climate emergency. It reflects our commitment to act with methods, ambition, and responsibility. Every employee has a role to play in this collective effort. Progress will be tracked regularly, with annual carbon footprint mapping to ensure transparency, effectiveness and continuous improvement in our actions."

About Daher - www.daher.com

Daher is an aircraft manufacturer, industrialist, industrial services provider, and logistics specialist, employing more than 14,000 people with revenue of €1.8 billion in 2024. With a family shareholding structure, Daher has been innovation-driven since its founding in 1863. With operations in about 15 countries across Europe, North America, and Asia, Daher designs and develops value-added solutions for its aerospace and industrial clients and partners.
